=NOTES=

- *1. Ta=25°C, maximum input current.
- *2. Differential voltage between the input and the output, when input current is flowing.
- *3. Reverse current is sink current flowing in RP from output circuit.
Specification condition is Ta=25°C, input voltage = 0VDC and applied output voltage = 60VDC.
- *4. Each current of each RP must be less than 20A. Parallel connection is acceptable up to 2 units maximum.
- *5. Output Derating
 - Derating at standard mounting. Refer to LOAD vs. AMBIENT TEMPERATURE (A271-01-02_).
 - When forced air cooling, refer to forced air cooling specifications (A271-01-03_).
 - Load (%) is percent of maximum input current, do not exceed its derating of maximum load.
