CUSTOMER'S PRODUCT NAME

TDK PRODUCT NAME

MULTILAYER CERAMIC CHIP CAPACITORS
 Low ESL Reverse Geometry
 Tape packaging【RoHS compliant】
 CGAE Type
 X7R, X7T Characteristics

Please return this specification to TDK representatives with your signature.
 If orders are placed without returned specification, please allow us to judge that specification is accepted by your side.

RECEIPT CONFIRMATION

DATE: _____ YEAR _____ MONTH _____ DAY _____

Test conditions in this specification based on AEC-Q200 for automotive application.

TDK Corporation

APPROVED	Person in charge

APPROVED	CHECKED	Person in charge

SCOPE

This delivery specification shall be applied to Multilayer ceramic chip capacitors to be delivered to _____.

PRODUCTION PLACES

Production places defined in this specification shall be TDK Corporation, TDK(Suzhou)Co.,Ltd and TDK Components U.S.A.,Inc.

PRODUCT NAME

The name of the product to be defined in this specifications shall be CGAE◇◇○○○△△□□□x.

REFERENCE STANDARD

JIS C 5101-1 : 2010	Fixed capacitors for use in electronic equipment-Part 1: Generic specification
C 5101-22 : 2014	Fixed capacitors for use in electronic equipment-Part22 : Sectional specification : Fixed surface mount multilayer capacitors of ceramic dielectric,Class2
C 0806-3 : 2014	Packaging of components for automatic handling - Part 3: Packaging of surface mount components on continuous tapes
JEITA RCR-2335 C 2014	Safety application guide for fixed ceramic capacitors for use in electronic equipment

CONTENTS

1. CODE CONSTRUCTION
2. OPERATING TEMPERATURE RANGE
3. STORING CONDITION AND TERM
4. INDUSTRIAL WASTE DISPOSAL
5. PERFORMANCE
6. INSIDE STRUCTURE AND MATERIAL
7. PACKAGING
8. SOLDERING CONDITION
9. CAUTION
10. TAPE PACKAGING SPECIFICATION

<EXPLANATORY NOTE>

When the mistrust in the spec arises, this specification is given priority. And it will be confirmed by written spec change after conference of both posts involved.

This specification warrants the quality of the ceramic chip capacitor. Capacitors should be evaluated or confirmed a state of mounted on your product.

If the use of the capacitors goes beyond the bounds of this specification, we can not afford to guarantee.

Division	Date	SPEC. No.
Ceramic Capacitors Business Group	November, 2021	A-RGC-d

1. CODE CONSTRUCTION

(Example) CGA E A 1 X7R 1 H 473 M T ○○○○
 (1) (2) (3) (4) (5) (6) (7) (8) (9) (10)

(1) Series

Symbol	Series
CGA	Ceramic chip capacitor for automotive application

(2) Type

Symbol	Type	Dimensions (Unit : mm)			
	TDK(EIA style)	L	W	T	B
E	CGAEA(CC0204)	0.52±0.05	1.00±0.05	0.30±0.05	0.10 min.
	CGAEB(CC0204)	0.58±0.10	1.10±0.10	0.58±0.10	0.10 min.
	CGAEW(CC0204)	0.50±0.10	1.00±0.10	0.20±0.05	0.10 min.

*As for each item, please refer to detail page on TDK web.

(3) Thickness

Symbol	Dimension(mm)
A	0.30
B	0.50
W	0.20

(4) Voltage condition in the life test

Symbol	Condition
1	Rated Voltage
2	Rated Voltage x 2
3	Rated Voltage x 1.5

(5) Temperature Characteristics

* Details are shown in table 1 No.6 at 5.PERFORMANCE.

(6) Rated Voltage

Symbol	Rated Voltage
1 H	DC 50 V
1 E	DC 25 V
0 J	DC 6.3V
0 G	DC 4 V

(7) Rated Capacitance

Stated in three digits and in units of pico farads (pF).
The first and Second digits identify the first and second significant figures of the capacitance, the third digit identifies the multiplier.

Symbol	Rated Capacitance
473	47,000 pF

(8) Capacitance tolerance

Symbol	Tolerance
M	± 20 %

(9) Packaging

Symbol	Packaging
T	Taping

(10) TDK Internal code

2. OPERATING TEMPERATURE RANGE

Min. operating Temperature	Max. operating Temperature	Reference Temperature
-55°C	125°C	25°C

3. STORING CONDITION AND TERM

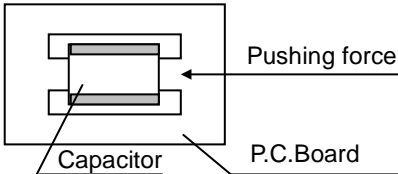

Storing temperature	Storing humidity	Storing term
5~40°C	20~70%RH	Within 6 months upon receipt.

4. INDUSTRIAL WASTE DISPOSAL

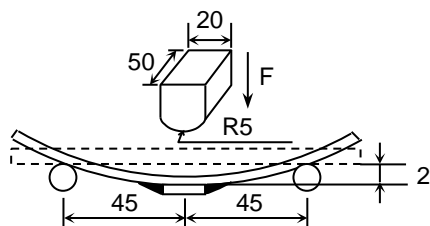

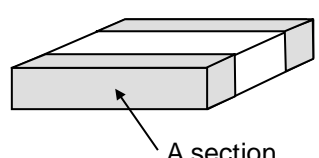

Dispose this product as industrial waste in accordance with the Industrial Waste Law.

5. PERFORMANCE

Table 1

No.	Item	Performance	Test or inspection method														
1	External Appearance	No defects, which may affect performance.	Inspect with magnifying glass (3×)														
2	Insulation Resistance	10,000MΩ or 500MΩ·μF min. (As for the capacitors of rated voltage 6.3V DC and lower, 100MΩ·μF min.), whichever smaller.	Measuring voltage : Rated voltage Voltage application time : 60s.														
3	Voltage Proof	Withstand test voltage without insulation breakdown or other damage.	Apply voltage : 2.5 × rated voltage Voltage application time : 1s. Charge/discharge current : 50mA or lower														
4	Capacitance	Within the specified tolerance.	<table border="1"> <thead> <tr> <th>Measuring frequency</th> <th>Measuring voltage</th> </tr> </thead> <tbody> <tr> <td>1kHz ± 10%</td> <td>1.0 ± 0.2Vrms.</td> </tr> </tbody> </table> <p>As for CGAEA1X7T0J104M, CGAEA3X7T0G104M and CGAEW1X7T0G104M, 0.5Vrms is applied.</p>	Measuring frequency	Measuring voltage	1kHz ± 10%	1.0 ± 0.2Vrms.										
Measuring frequency	Measuring voltage																
1kHz ± 10%	1.0 ± 0.2Vrms.																
5	Dissipation Factor	Please refer to detail page on TDK web.	See No.4 in this table for measuring condition.														
6	Temperature Characteristics of Capacitance	<table border="1"> <thead> <tr> <th>Capacitance Change (%)</th> </tr> </thead> <tbody> <tr> <td>No voltage applied</td> </tr> <tr> <td>X7R : ± 15</td> </tr> <tr> <td>X7T : $\begin{matrix} +22 \\ -33 \end{matrix}$</td> </tr> </tbody> </table>	Capacitance Change (%)	No voltage applied	X7R : ± 15	X7T : $\begin{matrix} +22 \\ -33 \end{matrix}$	<p>Capacitance shall be measured by the steps shown in the following table, after thermal equilibrium is obtained for each step.</p> <p>ΔC be calculated ref. STEP3 reading.</p> <table border="1"> <thead> <tr> <th>Step</th> <th>Temperature (°C)</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>25 ± 2</td> </tr> <tr> <td>2</td> <td>-55 ± 2</td> </tr> <tr> <td>3</td> <td>25 ± 2</td> </tr> <tr> <td>4</td> <td>125 ± 2</td> </tr> </tbody> </table> <p>As for measuring voltage, please contact with our sales representative.</p>	Step	Temperature (°C)	1	25 ± 2	2	-55 ± 2	3	25 ± 2	4	125 ± 2
Capacitance Change (%)																	
No voltage applied																	
X7R : ± 15																	
X7T : $\begin{matrix} +22 \\ -33 \end{matrix}$																	
Step	Temperature (°C)																
1	25 ± 2																
2	-55 ± 2																
3	25 ± 2																
4	125 ± 2																
7	Robustness of Terminations	No sign of termination coming off, breakage of ceramic, or other abnormal signs.	<p>Reflow solder the capacitor on a P.C.Board shown in Appendix 2.</p> <p>Apply a pushing force gradually at the center of a specimen in a horizontal direction of P.C.board.</p> <p>Pushing force : 2N Holding time : 10±1s.</p> 														

(continued)

No.	Item		Performance	Test or inspection method				
8	Bending	Capacitance	<hr/> Change from the value before test <hr/> $\pm 12.5 \%$ <hr/>	Reflow solder the capacitor on a P.C.Board shown in Appendix 1.  (Unit: mm)				
9	Solderability		New solder to cover over 75% of termination. 25% may have pinholes or rough spots but not concentrated in one spot. Ceramic surface of A sections shall not be exposed due to melting or shifting of termination material. 	Solder : Sn-3.0Ag-0.5Cu Flux : Isopropyl alcohol (JIS K 8839) Rosin (JIS K 5902) 25% solid solution. Solder temp. : $245 \pm 5^\circ\text{C}$ Dwell time : $3 \pm 0.3\text{s}$. Solder position : Until both terminations are completely soaked.				
10	Resistance to solder heat	External appearance	No cracks are allowed and terminations shall be covered at least 60% with new solder.	Solder : Sn-3.0Ag-0.5Cu Flux : Isopropyl alcohol (JIS K 8839) Rosin (JIS K 5902) 25% solid solution. Solder temp. : $260 \pm 5^\circ\text{C}$ Dwell time : $10 \pm 1\text{s}$. Solder position : Until both terminations are completely soaked. Pre-heating : Temp. — $110 \sim 140^\circ\text{C}$ Time — $30 \sim 60\text{s}$. Leave the capacitors in ambient condition for $24 \pm 2\text{h}$ before measurement.				
		Capacitance	<table border="1"> <thead> <tr> <th>Characteristics</th> <th>Change from the value before test</th> </tr> </thead> <tbody> <tr> <td>X7R X7T</td> <td>$\pm 7.5 \%$</td> </tr> </tbody> </table>		Characteristics	Change from the value before test	X7R X7T	$\pm 7.5 \%$

X7R X7T	Please contact with our sales representative.																		
D.F.	Meet the initial spec.																		
Insulation resistance	Meet the initial spec.																		
Voltage proof	No insulation breakdown or other damage.																		
13	Moisture Resistance (Steady State)	External appearance	No mechanical damage.	<p>Test temp. : 40±2°C Test humidity : 90~95%RH Test time : 500 +24,0h</p> <p>Leave the capacitors in ambient condition for 24±2h before measurement.</p> <p>Reflow solder the capacitors on a P.C.Board shown in Appendix2 before testing.</p>															
		Capacitance	Characteristics		Change from the value before test														
			X7R X7T		Please contact with our sales representative.														
		D.F.	200% of Initial spec max.																
Insulation resistance	1,000MΩ or 50MΩ·μF min. (As for the capacitors of rated voltage 6.3V DC and lower, 10MΩ·μF min.), whichever smaller.																		

(continued)

No.	Item		Performance	Test or inspection method	
14	Moisture Resistance	External appearance	No mechanical damage.	Test temp. : 85±2°C Test humidity : 85%RH Applied voltage : Rated voltage Test time : 1,000 +48,0h Charge/discharge current : 50mA or lower Leave the capacitors in ambient condition for 24±2h before measurement. Reflow solder the capacitors on a P.C.Board shown in Appendix2 before testing. Initial value setting Voltage conditioning 《After voltage treat the capacitors under testing temperature and voltage for 1 hour,》 leave the capacitors in ambient condition for 24±2h before measurement. Use this measurement for initial value.	
		Capacitance	Characteristics		Change from the value before test
			X7R X7T		Please contact with our sales representative.
		D.F.	200% of Initial spec max.		
Insulation resistance	500MΩ or 25MΩ·μF min. (As for the capacitors of rated voltage 6.3V DC and lower, 5MΩ·μF min.), whichever smaller.				
15	Life	External appearance	No mechanical damage.	Test temp. : 125±2°C Applied voltage : Please contact with our sales representative. Test time : 1,000 +48,0h Charge/discharge current : 50mA or lower Leave the capacitors in ambient condition for 24±2h before measurement. Reflow solder the capacitors on a P.C.Board shown in Appendix2 before testing. Initial value setting Voltage conditioning 《After voltage treat the capacitors under testing temperature and voltage for 1 hour,》 leave the capacitors in ambient condition for 24±2h before measurement. Use this measurement for initial value.	
		Capacitance	Characteristics		Change from the value before test
			X7R X7T		Please contact with our sales representative.
		D.F.	200% of Initial spec max.		
Insulation resistance	1,000MΩ or 50MΩ·μF min. (As for the capacitors of rated voltage 6.3V DC and lower, 10MΩ·μF min.), whichever smaller.				

*As for the initial measurement of capacitors on number 6,10,11,12 and 13 leave capacitors at 150 0,-10°C for 1h and measure the value after leaving capacitors for 24 ±2h in ambient condition.

(Unit: mm)

Symbol Case size	Dimensions		
	a	b	c
CGAEA (CC0204)	0.2	0.6	1.0
CGAEB (CC0204)	0.2	0.65	1.1
CGAEW (CC0204)	0.2	0.6	1.0

1. Material : Glass Epoxy(As per JIS C6484 GE4)

2. Thickness: Appendix 1 — 0.8mm
 Appendix 2 — 1.6mm

Copper (Thickness: 0.035mm)
 Solder resist

6. INSIDE STRUCTURE AND MATERIAL

No.	NAME	MATERIAL
1	Dielectric	BaTiO ₃
2	Electrode	Nickel (Ni)
3	Termination	Copper (Cu)
4		Nickel (Ni)
5		Tin (Sn)

7. PACKAGING

Packaging shall be done to protect the components from the damage during transportation and storing, and a label which has the following information shall be attached.

Tape packaging is as per 10. TAPE PACKAGING SPECIFICATION.

Information on label

- 1) Inspection No.
- 2) TDK P/N
- 3) Customer's P/N
- 4) Quantity

*Composition of Inspection No.

Example $\frac{E}{(a)} \frac{1}{(b)} \frac{A}{(c)} - \frac{23}{(d)} - \frac{001}{(e)}$

- (a) Line code
- (b) Last digit of the year
- (c) Month and A for January and B for February and so on. (Skip I)
- (d) Inspection Date of the month.
- (e) Serial No. of the day

*Composition of new Inspection No.

(Implemented on and after May 1, 2019 in sequence)

Example $\frac{I}{(a)} \frac{F}{(b)} \frac{1}{(c)} \frac{E}{(d)} \frac{23}{(e)} \frac{A0}{(f)} \frac{01}{(g)}$

- (a) Prefix
- (b) Line code
- (c) Last digit of the year
- (d) Month and A for January and B for February and so on. (Skip I)
- (e) Inspection Date of the month.
- (f) Serial No. of the day(00 ~ ZZ)
- (g) Suffix(00 ~ ZZ)

* It was shifted to the new inspection No. on and after May 2019, but the implementation timing may be different depending on shipment bases.

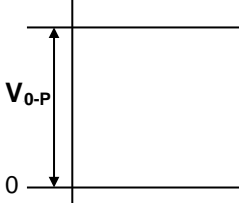

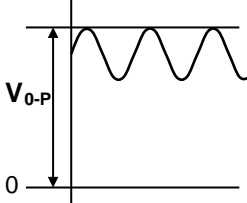

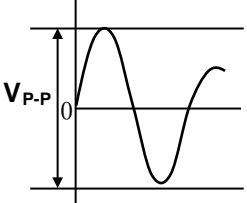

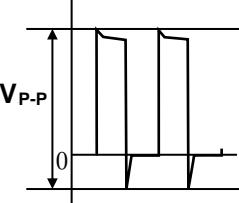

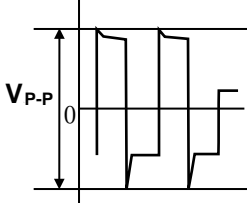

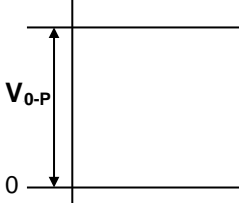

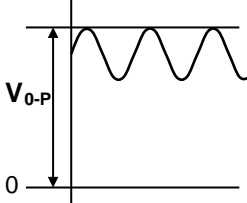

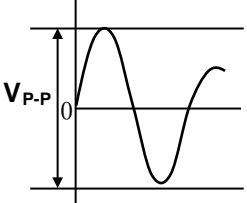

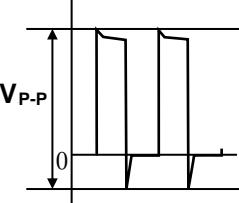

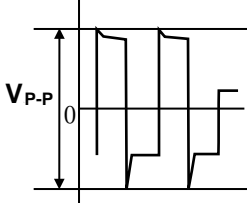

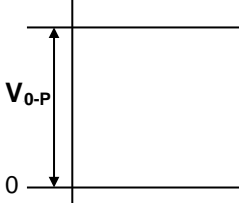

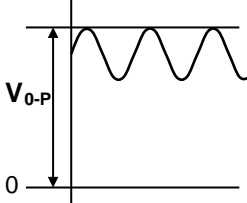

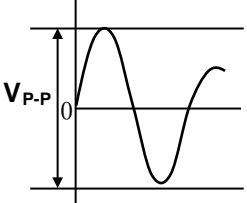

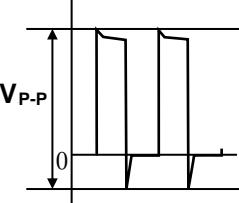

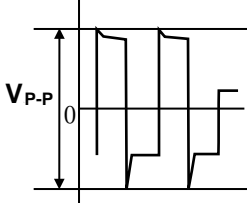

Until the shift is completed, either current or new composition of inspection No. will be applied.

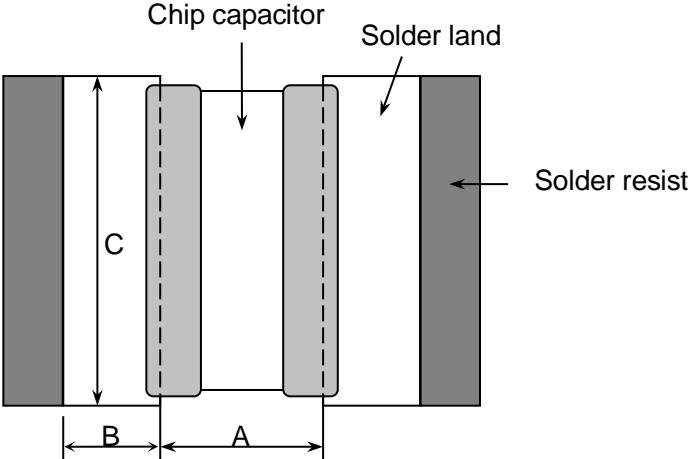

8. SOLDERING CONDITION

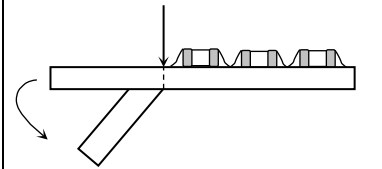

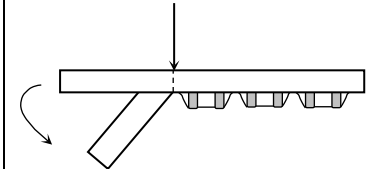

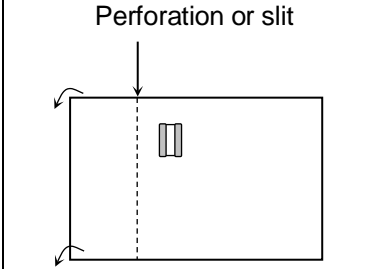

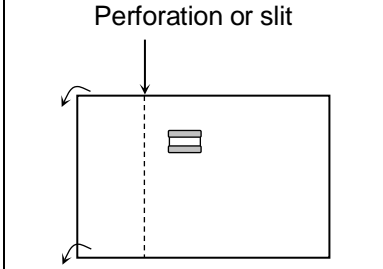

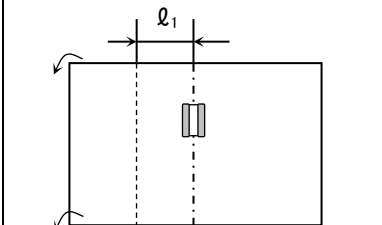

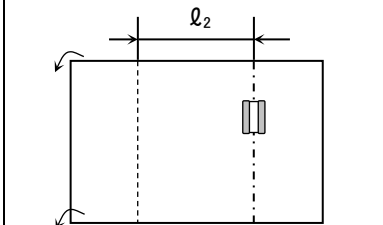

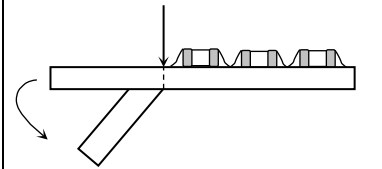

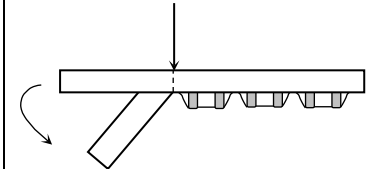

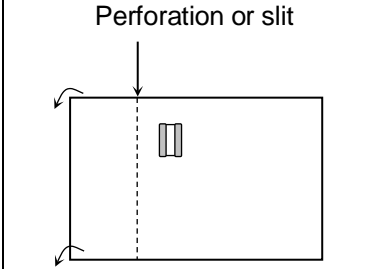

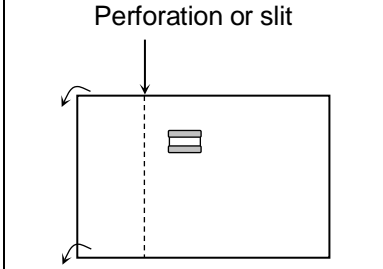

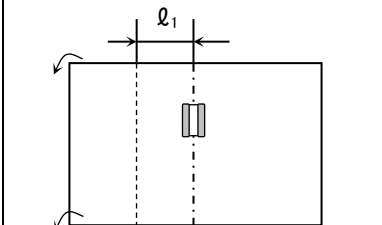

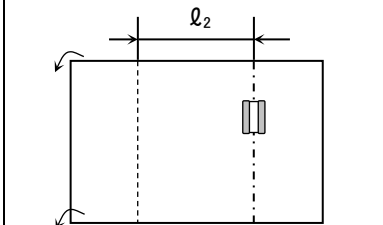

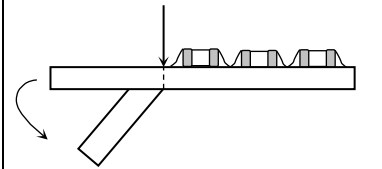

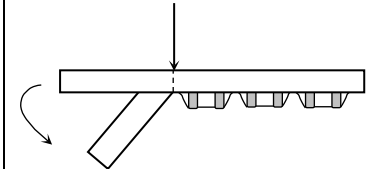

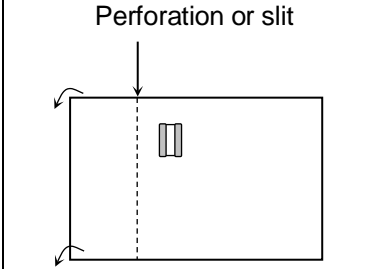

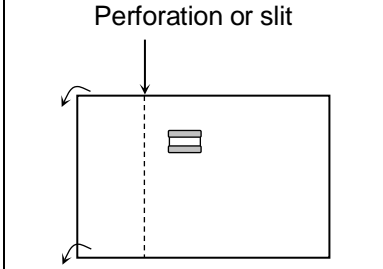

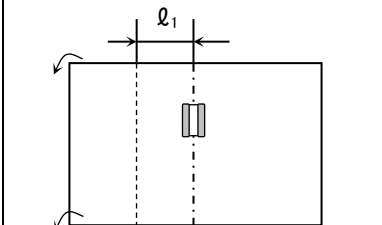

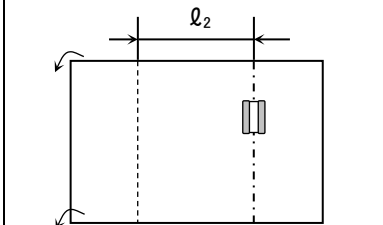

Reflow soldering only.

9. CAUTION

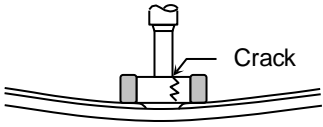

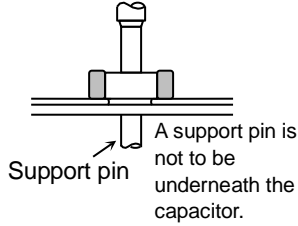

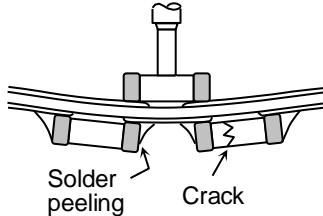

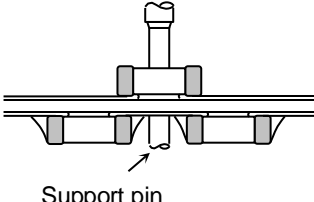

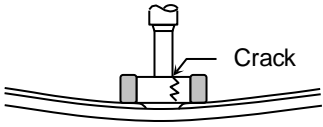

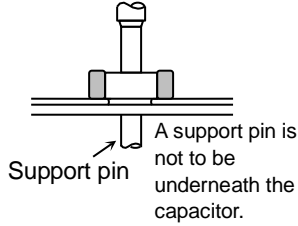

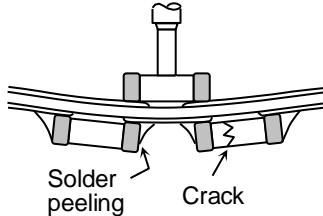

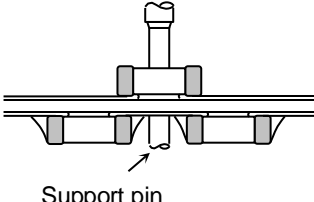

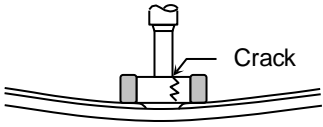

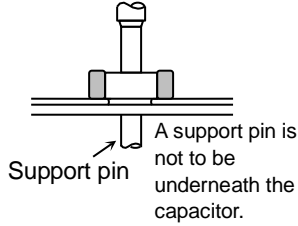

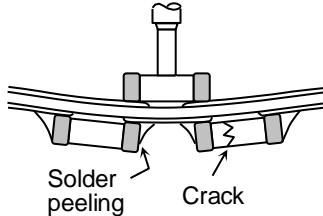

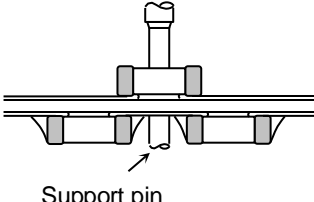

No.	Process	Condition
1	Operating Condition (Storage, Use, Transportation)	<p>1-1. Storage, Use</p> <p>The capacitors must be stored in an ambient temperature of 5 to 40°C with a relative humidity of 20 to 70%RH. JIS C 60721-3-1 Class 1K2 should be followed for the other climatic conditions.</p> <ol style="list-style-type: none"> 1) High temperature and humidity environment may affect a capacitor's solder ability because it accelerates terminal oxidization. They also deteriorate performance of taping and packaging. Therefore, SMD capacitors shall be used within 6 months. For capacitors with terminal electrodes consisting of silver or silver-palladium which tend to become oxidized or sulfurized, use as soon as possible, such as within one month after opening the bag. 2) When capacitors are stored for a longer time period than 6 months, confirm the solderability of the capacitors prior to use. During storage, keep the minimum packaging unit in its original packaging without opening it. Do not deviate from the above temperature and humidity conditions even for a short term. 3) Corrosive gasses in the air or atmosphere may result in deterioration of the reliability, such as poor solderability of the terminal electrodes. Do not store capacitors where they will be exposed to corrosive gas (e.g., hydrogen sulfide, sulfur dioxide, chlorine ammonia etc.) 4) Solderability and electrical performance may deteriorate due to photochemical change in the terminal electrode if stored in direct sunlight, or due to condensation from rapid changes in humidity. The capacitors especially which use resin material must be operated and stored in an environment free of dew condensation, as moisture absorption due to condensation may affect the performance. 5) Refer to JIS C 60721-3-1, class 1K2 for other climate conditions. <p>1-2. Handling in transportation</p> <p>In case of the transportation of the capacitors, the performance of the capacitors may be deteriorated depending on the transportation condition. (Refer to JEITA RCR-2335C 9.2 Handling in transportation)</p>
2	Circuit design  Caution	<p>2-1. Operating temperature</p> <ol style="list-style-type: none"> 1) Upper category temperature (maximum operating temperature) is specified. It is necessary to select a capacitor whose rated temperature is higher than the operating temperature. Also, it is necessary to consider the temperature distribution in the equipment and seasonal temperature variation. 2) Surface temperature including self heating should be below maximum operating temperature. Due to dielectric loss, capacitors will heat itself when AC is applied due to ESR. Especially at high frequencies, please be careful that the heat might be so extreme. Also, even if the surface temperature of the capacitor includes self-heating and is the maximum operating temperature or lower, excessive heating of the capacitor due to self-heating may cause deterioration of the characteristics and reliability of the capacitor. The self-heating temperature rise of the capacitor changes depending on the difference in heat radiation due to the mounting method to the device, the ambient temperature, the cooling method of the device and circuit board material and the design, etc. The load should be contained so that the self-heating temperature rise of the capacitor body in a natural convection environment at an ambient temperature of 25°C remain below 20°C. <p>When using in a high-frequency circuit or a circuit in which a capacitor generates heat, such as when a high-frequency ripple current flows, pay attention to the above precautions. (Note that accurate measurement may not be possible with self-heating measurement when the equipment applies cooling other than natural convection such as a cooling fan.)</p>

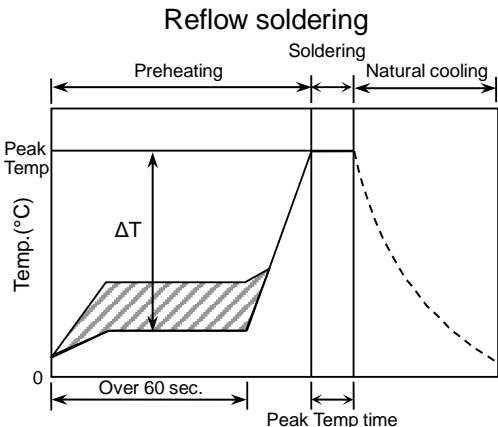

No.	Process	Condition														
2	Circuit design  Caution	<p>3) The electrical characteristics of the capacitors will vary depending on the temperature. The capacitors should be selected and designed in taking the temperature into consideration.</p> <p>2-2. When overvoltage is applied Applying overvoltage to a capacitor may cause dielectric breakdown and result in a short circuit. The duration until dielectric breakdown depends on the applied voltage and the ambient temperature.</p> <p>2-3. Operating voltage 1) Operating voltage across the terminals should be below the rated voltage. When AC and DC are super imposed, V_{0-P} must be below the rated voltage. — (1) and (2) AC or pulse with overshooting, V_{P-P} must be below the rated voltage. — (3), (4) and (5) When the voltage is started to apply to the circuit or it is stopped applying, the irregular voltage may be generated for a transit period because of resonance or switching. Be sure to use the capacitors within rated voltage containing these Irregular voltage.</p> <table border="1" data-bbox="470 750 1444 1025"> <thead> <tr> <th data-bbox="470 750 662 795">Voltage</th> <th data-bbox="662 750 917 795">(1) DC voltage</th> <th data-bbox="917 750 1181 795">(2) DC+AC voltage</th> <th data-bbox="1181 750 1444 795">(3) AC voltage</th> </tr> </thead> <tbody> <tr> <td data-bbox="470 795 662 1025">Positional Measurement (Rated voltage)</td> <td data-bbox="662 795 917 1025">  </td> <td data-bbox="917 795 1181 1025">  </td> <td data-bbox="1181 795 1444 1025">  </td> </tr> </tbody> </table> <table border="1" data-bbox="470 1052 1181 1328"> <thead> <tr> <th data-bbox="470 1052 662 1097">Voltage</th> <th data-bbox="662 1052 917 1097">(4) Pulse voltage (A)</th> <th data-bbox="917 1052 1181 1097">(5) Pulse voltage (B)</th> </tr> </thead> <tbody> <tr> <td data-bbox="470 1097 662 1328">Positional Measurement (Rated voltage)</td> <td data-bbox="662 1097 917 1328">  </td> <td data-bbox="917 1097 1181 1328">  </td> </tr> </tbody> </table> <p>2) Even below the rated voltage, if repetitive high frequency AC or pulse is applied, the reliability of the capacitors may be reduced.</p> <p>3) The effective capacitance will vary depending on applied DC and AC voltages. The capacitors should be selected and designed in taking the voltages into consideration.</p> <p>4) Abnormal voltage (surge voltage, static electricity, pulse voltage, etc.) shall not exceed the rated voltage.</p> <p>5) When capacitors are used in a series connection, it is necessary to add a balancing circuit such as voltage dividing resistors in order to avoid an imbalance in the voltage applied to each capacitor.</p> <p>2-4. Frequency When the capacitors (Class 2) are used in AC and/or pulse voltages, the capacitors may vibrate themselves and generate audible sound.</p>	Voltage	(1) DC voltage	(2) DC+AC voltage	(3) AC voltage	Positional Measurement (Rated voltage)				Voltage	(4) Pulse voltage (A)	(5) Pulse voltage (B)	Positional Measurement (Rated voltage)

3	Designing P.C.board	<p>The amount of solder at the terminations has a direct effect on the reliability of the capacitors.</p> <ol style="list-style-type: none"> 1) The greater the amount of solder, the higher the stress on the chip capacitors, and the more likely that it will break. When designing a P.C.board, determine the shape and size of the solder lands to have proper amount of solder on the terminations. 2) Avoid using common solder land for multiple terminations and provide individual solder land for each terminations. 3) Size and recommended land dimensions. <div style="text-align: center;">  <p>The diagram illustrates the recommended dimensions for a chip capacitor on a PCB. It shows a central chip capacitor flanked by two solder lands. Dimension A is the width of the solder land on one side of the capacitor. Dimension B is the width of the solder land on the other side. Dimension C is the length of the capacitor. Labels include 'Chip capacitor', 'Solder land', and 'Solder resist'.</p> </div> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th colspan="2" style="text-align: left;">Reflow soldering</th> <th colspan="3" style="text-align: right;">(mm)</th> </tr> <tr> <th style="text-align: center;">Type Symbol</th> <th style="text-align: center;">CGAEA (CC0204)</th> <th style="text-align: center;">CGAEB (CC0204)</th> <th colspan="2" style="text-align: center;">CGAEW (CC0204)</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">A</td> <td style="text-align: center;">0.2</td> <td style="text-align: center;">0.2</td> <td colspan="2" style="text-align: center;">0.2</td> </tr> <tr> <td style="text-align: center;">B</td> <td style="text-align: center;">0.2</td> <td style="text-align: center;">0.225</td> <td colspan="2" style="text-align: center;">0.2</td> </tr> <tr> <td style="text-align: center;">C</td> <td style="text-align: center;">1.0</td> <td style="text-align: center;">1.1</td> <td colspan="2" style="text-align: center;">1.0</td> </tr> </tbody> </table>	Reflow soldering		(mm)			Type Symbol	CGAEA (CC0204)	CGAEB (CC0204)	CGAEW (CC0204)		A	0.2	0.2	0.2		B	0.2	0.225	0.2		C	1.0	1.1	1.0

5	Soldering	<p>5-1. Flux selection</p> <p>Although highly-activated flux gives better solderability, substances which increase activity may also degrade the insulation of the chip capacitors. To avoid such degradation, it is recommended following.</p> <ol style="list-style-type: none"> 1) It is recommended to use a mildly activated rosin flux (less than 0.1wt% chlorine). Strong flux is not recommended. 2) Excessive flux must be avoided. Please provide proper amount of flux. 3) When water-soluble flux is used, enough washing is necessary. <p>5-2. Recommended soldering profile : Reflow method</p> <p>Refer to the following temperature profile at Reflow soldering.</p> <div style="text-align: center;">  <p>The graph illustrates the temperature profile for reflow soldering. The y-axis represents temperature in degrees Celsius, with a 'Peak Temp' indicated. The x-axis represents time, divided into three phases: 'Preheating', 'Soldering', and 'Natural cooling'. The 'Preheating' phase is marked as 'Over 60 sec.' and shows a temperature rise to a plateau. The 'Soldering' phase is a vertical line at the 'Peak Temp'. The 'Natural cooling' phase is a dashed line showing the temperature decreasing. A shaded area under the preheating curve is labeled 'ΔT'. The duration of the peak temperature is labeled 'Peak Temp time'.</p> </div> <p>5-3. Recommended soldering peak temp and peak temp duration for Reflow soldering</p> <p>Pb free solder is recommended, but if Sn-37Pb must be used, refer to below.</p> <table border="1" data-bbox="480 1267 1275 1485"> <thead> <tr> <th rowspan="2" style="text-align: center;">Temp./Duration</th> <th colspan="2" style="text-align: center;">Reflow soldering</th> </tr> <tr> <th style="text-align: center;">Peak temp(°C)</th> <th style="text-align: center;">Duration(sec)</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">Solder</td> <td></td> <td></td> </tr> <tr> <td style="text-align: center;">Lead Free Solder</td> <td style="text-align: center;">260 max.</td> <td style="text-align: center;">10 max.</td> </tr> <tr> <td style="text-align: center;">Sn-Pb Solder</td> <td style="text-align: center;">230 max.</td> <td style="text-align: center;">20 max.</td> </tr> </tbody> </table> <p>Recommended solder compositions Lead Free Solder : Sn-3.0Ag-0.5Cu</p>	Temp./Duration	Reflow soldering		Peak temp(°C)	Duration(sec)	Solder			Lead Free Solder	260 max.	10 max. No.	Process	Condition
7	Cleaning	<p>1) If an unsuitable cleaning fluid is used, flux residue or some foreign articles may stick to chip capacitors surface to deteriorate especially the insulation resistance.</p> <p>2) If cleaning condition is not suitable, it may damage the chip capacitors.</p> <p>2)-1. Insufficient washing</p> <p>(1) Terminal electrodes may corrode by Halogen in the flux.</p> <p>(2) Halogen in the flux may adhere on the surface of capacitors, and lower the insulation resistance.</p> <p>(3) Water soluble flux has higher tendency to have above mentioned problems (1) and (2).</p> <p>2)-2. Excessive washing</p> <p>When ultrasonic cleaning is used, excessively high ultrasonic energy output can affect the connection between the ceramic chip capacitor's body and the terminal electrode. To avoid this, following is the recommended condition.</p> <p style="padding-left: 40px;">Power: 20W/ ℓ max.</p> <p style="padding-left: 40px;">Frequency: 40kHz max.</p> <p style="padding-left: 40px;">Washing time: 5 minutes max.</p> <p>2)-3. If the cleaning fluid is contaminated, density of Halogen increases, and it may bring the same result as insufficient cleaning.</p>
8	Coating and molding of the P.C.board	<p>1) When the P.C.board is coated, please verify the quality influence on the product.</p> <p>2) Please verify carefully that there is no harmful decomposing or reaction gas emission during curing which may damage the chip capacitors.</p> <p>3) Please verify the curing temperature.</p>
9	Handling after chip mounted  Caution	<p>1) Please pay attention not to bend or distort the P.C.board after soldering in handling otherwise the chip capacitors may crack.</p> <div style="text-align: center;">  </div>

No.	Process	Condition															
9	Handling after chip mounted  Caution	<p>2) Printed circuit board cropping should not be carried out by hand, but by using the proper tooling. Printed circuit board cropping should be carried out using a board cropping jig as shown in the following figure or a board cropping apparatus to prevent inducing mechanical stress on the board.</p> <p>(1) Example of a board cropping jig Recommended example: The board should be pushed from the back side, close to the cropping jig so that the board is not bent and the stress applied to the capacitor is compressive. Unrecommended example: If the pushing point is far from the cropping jig and the pushing direction is from the front side of the board, large tensile stress is applied to the capacitor, which may cause cracks.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="454 593 758 862"> <p>Outline of jig</p>  </div> <div data-bbox="758 582 1444 851"> <table border="1"> <thead> <tr> <th data-bbox="758 582 1093 638">Recommended</th> <th data-bbox="1093 582 1444 638">Unrecommended</th> </tr> </thead> <tbody> <tr> <td data-bbox="758 638 1093 851">  </td> <td data-bbox="1093 638 1444 851">  </td> </tr> </tbody> </table> </div> </div> <p>(2) Example of a board cropping machine An outline of a printed circuit board cropping machine is shown below. The top and bottom blades are aligned with one another along the lines with the V-grooves on printed circuit board when cropping the board. Unrecommended example: Misalignment of blade position between top and bottom, right and left, or front and rear blades may cause a crack in the capacitor.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="550 1164 965 1422"> <p>Outline of machine</p>  </div> <div data-bbox="965 1164 1412 1411"> <p>Principle of operation</p>  </div> </div> <div style="text-align: center; margin: 10px 0;"> <p>Cross-section diagram</p>  </div> <table border="1" style="width: 100%; text-align: center;"> <thead> <tr> <th data-bbox="638 1635 821 1713" rowspan="2">Recommended</th> <th colspan="3" data-bbox="821 1635 1348 1680">Unrecommended</th> </tr> <tr> <th data-bbox="821 1680 997 1758">Top-bottom misalignment</th> <th data-bbox="997 1680 1173 1758">Left-right misalignment</th> <th data-bbox="1173 1680 1348 1758">Front-rear misalignment</th> </tr> </thead> <tbody> <tr> <td data-bbox="638 1758 821 2060">  </td> <td data-bbox="821 1758 997 2060">  </td> <td data-bbox="997 1758 1173 2060">  </td> <td data-bbox="1173 1758 1348 2060">  </td> </tr> </tbody> </table>	Recommended	Unrecommended			Recommended	Unrecommended			Top-bottom misalignment	Left-right misalignment	Front-rear misalignment

9	Handling after chip mounted ⚠ Caution	<p>3) When functional check of the P.C.board is performed, check pin pressure tends to be adjusted higher for fear of loose contact. But if the pressure is excessive and bend the P.C.board, it may crack the chip capacitors or peel the terminations off. Please adjust the check pins not to bend the P.C.board.</p> <table border="1" data-bbox="475 383 1433 680"> <thead> <tr> <th data-bbox="475 383 616 443">Item</th> <th data-bbox="616 383 1034 443">Not recommended</th> <th data-bbox="1034 383 1433 443">Recommended</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 443 616 680">Board bending</td> <td data-bbox="616 443 1034 680">  <p>Termination peeling</p> <p>Check pin</p> </td> <td data-bbox="1034 443 1433 680">  <p>Support pin</p> <p>Check pin</p> </td> </tr> </tbody> </table>	Item	Not recommended	Recommended	Board bending	 <p>Termination peeling</p> <p>Check pin</p>	 <p>Support pin</p> <p>Check pin</p>
Item	Not recommended	Recommended						
Board bending	 <p>Termination peeling</p> <p>Check pin</p>	 <p>Support pin</p> <p>Check pin</p>						
10	Handling of loose chip capacitors	<p>1) If dropped the chip capacitors may crack. Once dropped do not use it. Especially, the large case sized chip capacitors are tendency to have cracks easily, so please handle with care.</p>  <p>Floor</p> <p>Crack</p> <p>2) Piling the P.C.board after mounting for storage or handling, the corner of the P.C. board may hit the chip capacitors of another board to cause crack.</p>  <p>P.C.board</p> <p>Crack</p>						
11	Capacitance aging	<p>The capacitors (Class 2) have aging in the capacitance. They may not be used in precision time constant circuit. In case of the time constant circuit, the evaluation should be done well.</p>						
12	Estimated life and estimated failure rate of capacitors	<p>As per the estimated life and the estimated failure rate depend on the temperature and the voltage. This can be calculated by the equation described in JEITA RCR-2335C Annex F (Informative) Calculation of the estimated lifetime and the estimated failure rate (Voltage acceleration coefficient : 3 multiplication rule, Temperature acceleration coefficient : 10°C rule)</p> <p>The failure rate can be decreased by reducing the temperature and the voltage but they will not be guaranteed.</p>						

No.	Process	Condition
13	Caution during operation of equipment	<p>1) A capacitor shall not be touched directly with bare hands during operation in order to avoid electric shock. Electric energy held by the capacitor may be discharged through the human body when touched with a bare hand. Even when the equipment is off, a capacitor may stay charged. The capacitor should be handled after being completely discharged using a resistor.</p> <p>2) The terminals of a capacitor shall not be short-circuited by any accidental contact with a conductive object. A capacitor shall not be exposed to a conductive liquid such as an acid or alkali solution. A conductive object or liquid, such as acid and alkali, between the terminals may lead to the breakdown of a capacitor due to short circuit</p> <p>3) Confirm that the environment to which the equipment will be exposed during transportation and operation meets the specified conditions. Do not to use the equipment in the following environments.</p> <p>(1) Environment where a capacitor is splattered with water or oil (2) Environment where a capacitor is exposed to direct sunlight (3) Environment where a capacitor is exposed to Ozone, ultraviolet rays or radiation (4) Environment where a capacitor exposed to corrosive gas(e.g. hydrogen sulfide, sulfur dioxide, chlorine. ammonia gas etc.) (5) Environment where a capacitor exposed to vibration or mechanical shock exceeding the specified limits. (6) Atmosphere change with causes condensation</p>
14	Others  Caution	<p>The product listed in this specification is intended for use in automotive applications under-normal operation and usage conditions.</p> <p>The product is not designed or warranted to meet the requirements of application listed below, whose performance and/or quality requires a more stringent level of safety or reliability, or whose failure, malfunction or defect could cause serious damage to society, person or property. Please understand that we are not responsible for any damage or liability caused by use of the products in any of the applications below or for any other use exceeding the range or conditions set forth in this specification sheet. If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in this specification, please contact us.</p> <p>(1) Aerospace/Aviation equipment (2) Transportation equipment (electric trains, ships etc.) (3) Medical equipment (Excepting Pharmaceutical Affairs Law classification Class1, 2) (4) Power-generation control equipment (5) Atomic energy-related equipment (6) Seabed equipment (7) Transportation control equipment (8) Public information-processing equipment (9) Military equipment (10) Electric heating apparatus, burning equipment (11) Disaster prevention/crime prevention equipment (12) Safety equipment (13) Other applications that are not considered general-purpose applications</p> <p>When designing your equipment even for general-purpose applications, you are kindly requested to take into consideration securing protection circuit/device or providing backup circuits in your equipment.</p> <p>In addition, although the product listed in this specification is intended for use in automotive applications as described above, it is not prohibited to use for general electronic equipment, whose performance and/or quality doesn't require a more stringent level of safety or reliability, or whose failure, malfunction or defect could not cause serious damage to society, person or property.</p> <p>Therefore, the description of this caution will be applied, when the product is used in general electronic equipment under a normal operation and usage conditions.</p>

10. TAPE PACKAGING SPECIFICATION

1. CONSTRUCTION AND DIMENSION OF TAPING

1-1. Dimensions of carrier tape

Dimensions of paper tape shall be according to Appendix 3, 4.

1-2. Bulk part and leader of taping

1-3. Dimensions of reel

Dimensions of Ø178 reel shall be according to Appendix 5.

Dimensions of Ø 330 reel shall be according to Appendix 6.

1-4. Structure of taping

2. CHIP QUANTITY

Please refer to detail page on TDK web.

3. PERFORMANCE SPECIFICATIONS

3-1. Fixing peeling strength (top tape)

$$0.05\text{N} < \text{Peeling strength} < 0.7\text{N}$$

〔 Paper tape should not adhere to top cover tape when pull the cover tape. 〕

3-2. Carrier tape shall be flexible enough to be wound around a minimum radius of 30mm with components in tape.

3-3. The missing of components shall be less than 0.1%

3-4. Components shall not stick to fixing tape.

3-5. When removing the cover tape, there shall not be difficulties by unfitting clearance gap, burrs and crushes of cavities. Also the sprocket holes shall not be covered by absorbing dust into the suction nozzle.

() Reference value.

Appendix 5

Dimensions of reel (Material : Polystyrene)

(Unit : mm)

Symbol	A	B	C	D	E	W1
Dimension	$\phi 178 \pm 2.0$	$\phi 60 \pm 2.0$	$\phi 13 \pm 0.5$	$\phi 21 \pm 0.8$	2.0 ± 0.5	9.0 ± 0.3
Symbol	W2	R				
Dimension	13.0 ± 1.4	1.0				

Appendix 6

Dimensions of reel (Material : Polystyrene)

(Unit : mm)

Symbol	A	B	C	D	E	W
Dimension	$\phi 382$ max. (Nominal $\phi 330$)	$\phi 50$ min.	$\phi 13 \pm 0.5$	$\phi 21 \pm 0.8$	2.0 ± 0.5	10.0 ± 1.5
Symbol	t	R				
Dimension	2.0 ± 0.5	1.0
