\*Read instruction manual carefully, before using the power supply unit.

=NOTES=

\*1. At 115VAC/230VAC, Ta=25°C, Nominal output voltage and maximum output power.

\*2. For cases where conformance to various safety specs (UL, CSA, EN) are required,

input voltage range will be 100 ~ 240VAC (50-60Hz).

Output derating required when Vin is less than 115VAC, refer to output derating curve for details.

\*3. Not applicable for the in-rush current to Noise Filter for less than 0.2ms.

\*4. Please refer to Fig. A for measurement of Vo, line and load regulation and ripple voltage.

\*5. Ripple &amp; noise are measured at 20MHz by using a 150mm twisted pair of load wires terminated with a 0.1uF and 100uF capacitor.

\*6. 85~265VAC, constant load.

\*7. No load - full load, constant input voltage.

\*8. Hiccup with automatic recovery, however power supply may be latched for protection when output is shorted and manual reset is required (Repower on).

Avoid to operate at over load or short circuit condition.

\*9. OVP circuit shut down the output, manual reset (Repower on) to get output voltage.

\*10. Measured by the each measuring method of UL, CSA, and EN (at 60Hz), Ta=25°C.

\*11. Refer to output derating curve for details of output derating versus

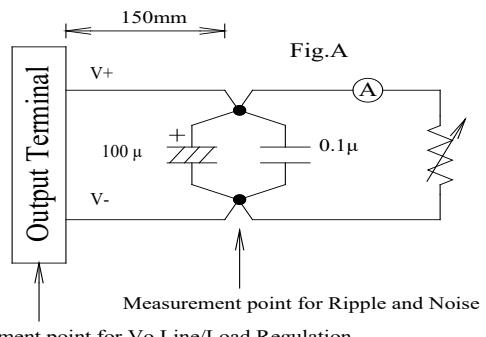

input voltage, ambient temperature and mounting method .

- Load (%) is percent of maximum output power or maximum output current.

- Do not exceed its derating of Maximum Load.

\*12. Forced air cooling with air velocity more than 1.5m/s (measured at component side, The entire components must be cooled).

\*13. The power consumption refers to input power during remote off and standby mode power is at no load condition.
