=NOTES=

- *1. Ta=25°C, nominal output voltage and maximum output power.
- *2. For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100 - 240VAC (50-60Hz).
- *3. Not applicable for the inrush current to Noise Filter for less than 0.2ms.
- *4. Refer to Fig. A for measurement of ripple voltage.
- *5. 85 - 265VAC, constant load.
- *6. No load - Full load, constant input voltage.
- *7. Over current protection (OCP) mode is selectable, "Constant current limit with automatic recovery" or "Output shutdown".
Manual reset is executed by "Re power on" or "restart by remote on/off control". OCP point can be adjusted by communication function.
Avoid to operate at over load or short circuit condition.
- *8. Over voltage protection (OVP) mode is selectable, "Automatic recovery" or "Output shutdown".
Manual reset is executed by "Re power on" or "restart by remote on/off control". OVP point can be adjusted by communication function.
- *9. Measured by the each measuring method of UL, CSA, EN and Den-an (at 60Hz), Ta=25°C.
- *10. Output Derating
 - When ambient temperature is more than 50°C, refer to OUTPUT CURRENT vs. AMBIENT TEMPERATURE (A263-01-02_).
 - When input voltage is less than 170VAC. Refer to OUTPUT POWER vs. INPUT VOLTAGE (A263-01-02_).
- *11. The power supply is considered a component which will be installed into a final equipment.
The final equipment should be re-evaluated that it meets EMC directives.
- *12. Refer to instruction manual (A263-04-01_).
- *13. Using 4 Mount Holes at bottom side.
- *14. At -40 - -20°C, the electrical characteristics are not guaranteed.

*Refer to NOTES

Fig. 1

Fig. 2

=NOTES=

Use so that both of 1. and 2. shall be satisfied.

1. Derating is necessary to output current in case of ambient temperature more than 50°C. (Fig.1)
2. Derating is necessary to output power in case of input voltage less than 170VAC. (Fig.2)

For example, in case of input voltage 100VAC and ambient temperature 60°C and mounting A at 24V model .

According to 1. ambient temperature derating, output current limit is 75% (18.75A). ---(1)

According to 2. input voltage derating, output power limit is 500W. ---(2)

When $V_o \leq 26.6V$, the derating is determined by output current (1). Because output power is less than 500W ($26.6V \times 18.75A$).

When $V_o > 26.6V$, the derating is determined by output power (2).

*In forced air condition, the entire components shall be cooled. Temperature of L2 and L5 need to be less than 85 °C.
