SPECIFICATIONS (2/2)

*Read instruction manual carefully, before using the power supply unit.

=NOTES=

*1. At 100VAC/200VAC, Ta=25℃, nominal output voltage and maximum output power.
*2. For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100-240Vac (50-60Hz).
*3. Not applicable for the inrush current to noise filter for less than 0.2ms.
*4. Please refer to Fig.A for measurement of Vo, Line&Load regulation and ripple voltage.
*5. 85 - 265VAC, constant load.
*6. No load to full load, constant input voltage.
*7. Current limiting (Hiccup) with automatic recovery.
Avoid to operate at over load or short circuit condition.
*8. Over voltage clamping by zener diode.
*9. Measured by the each measuring method of UL, CSA, EN and DENAN (at 60Hz), Ta=25°C.
*10. At 100VAC, Ta=25°C, nominal output voltage and 80% output power.
*11. Output Deratings,
- Convection cooling output derating. Refer to OUTPUT DERATING vs. AMBIENT TEMPERATURE (FA012-01-02_).
- Forced air cooling output derating. Refer to OUTPUT DERATING vs. AMBIENT TEMPERATURE (FA012-01-03_).
Load (%) is persent of maximum output power or maximum output current, whichever is greater.
It must not exceed its specification and derating.
*12. The result is evaluated by TDK-Lambda standard measurement condition.
The power supply is considered a component which will be installed into a final equipment.
The final equipment should be re-evaluated that it meets EMC, Vibration and Shock directives.
