GENERAL PRODUCT INFORMATION:

Report Summary

All applicable tests according to the referenced standard(s) have been carried out.

Product Description

Unit is a DC to DC power supply unit, suitable to connection to large battery system or DC mains, with modular output design allowing versatile configuration of output number, voltage and power.

Model Differences

See enclosure 7-03

Additional application considerations – (Considerations used to test a component or sub-assembly) - See enclosure 6-02 for guide on selection output modules

Sample from 2020-09-02 used for construction review 2020-09-02

Technical Considerations

- The product was submitted and evaluated for use at the maximum ambient temperature (Tma) permitted by the manufacturer's specification of : 50°C
- The product is intended for use on the following power systems: DC mains supply
- Considered current rating of protective device as part of the building installation (A): 20
- Mains supply tolerance (%) or absolute mains supply values : DC mains supply, DC Mains: +20%/-15%
- The equipment disconnect device is considered to be : determined in End product
- The following were investigated as part of the protective earthing/bonding: Printed wiring board trace (refer to Enclosure Schematics + PWB for layouts)
- The following are available from the Applicant upon request: Installation (Safety) Instructions / Manual, including French language for Canada.
- The product was investigated to the following additional standard: EN 62368-1:2014 + A11:2017

Engineering Conditions of Acceptability

When installed in an end-product, consideration must be given to the following:

• The following product-line tests are conducted for this product: Earthing Continuity, Electric Strength

Issue Date: 2020-09-28 Page 8 of 160 Report Reference # E135494-A6026-CB-1

- The following output circuits are at ES1 energy levels : see enclosure
- The following output circuits are at ES2 energy levels: see enclosure
- The following output circuits are at ES3 energy levels: see enclosure
- The following output circuits are at PS3 energy levels: all outputs
- The maximum investigated branch circuit rating is: 20 A
- The investigated Pollution Degree is: 2
- Proper bonding to the end-product main protective earthing termination is: Required
- An investigation of the protective bonding terminals has : been conducted
- The following input terminals/connectors must be connected to the end-product supply neutral : Marked "N"
- The following end-product enclosures are required: Electrical, Fire, Mechanical
- The following magnetic devices (e.g. transformers or inductor) are provided with an OBJY2 insulation system with the indicated rating greater than Class A (105°C): see enclosure 4-01
- The following components require special consideration during end-product Thermal (Heating) tests due to the indicated maximum temperature measurements during component-level testing: see enclosure 7-03
- The following input terminals were evaluated as suitable for direct connection to the DC Mains Supply:
 L, N
- The equipment is suitable for direct connection to : DC mains supply
- The power supply was evaluated to be used at altitudes up to: 5000 m
